

HOSSEIN SANJABIAN

Software Engineer / Backend Developer

+989364431229 @ sanjabian.ho@gmail.com zenorium.dev Tehran, Tehran Province, Iran
☆ Birth: 2002/04/10

EXPERIENCE

Software Engineer

Axeto

04/2024 - Present Tehran

axeto.app

- Led architecture and technical design of the company's new core system (**Mirror**) — including both **application** and **system-level design**
- Owned end-to-end design and delivery of the Mirror platform — from system architecture to implementation — ensuring production readiness and scalability
- Upgraded legacy Identity Provider to align with modern **OAuth2.0 / OIDC** standards, fixing token log concurrency issues in the process
- Evolved Mirror backend with focus on **event-driven reliability**, **scalability**, and **modular monolith architecture**
- Adopted CQRS to separate reads/writes under high load, improving data consistency and system scalability
- Redesigned domain models to improve **decoupling**, **testability**, and overall maintainability of bounded contexts
- Migrated legacy services to modern **.NET versions**, and introduced **Observability (structured logs, tracing)** for easier diagnosis and tracing
- Implemented **Inbox / Outbox pattern** along with **Saga orchestration** to ensure reliable async workflows and handle long-running operations
- Designed and developed **leaky-bucket rate limiting** to prevent abuse from unauthenticated users and maintain performance under high pressure
- Built test infrastructure (unit, integration, E2E) and CI/CD pipelines to ensure system reliability under high load

Software Engineer

Mavaraye Abad Raika

02/2023 - 04/2024 Tehran

- Boosted data throughput by 30% by transitioning from SQL queries to read-optimized services
- Refactored core logic to support dynamic services and real-time campaigns with cleaner separation of responsibilities
- Refactored .NET Framework services into modular .NET Core applications

Software Engineer

Simorgh Talaei Abhaye jonob

04/2022 - 04/2023 Bandar Abbas

- Designed and implemented a state machine to manage complex permission flows and dynamic status transitions
- Built dynamic forms and UI logic via metadata-driven backends
- Integrated Excel Interop with business logic for internal data exchange and reporting

SKILLS

Frameworks: ASP.NET Core, FastApi, Django, Flask, gRPC, SignalR

Databases: SqlServer, PostgreSQL, MySQL, MongoDB, Redis

Messaging & Queues: RabbitMQ, Kafka, Redis Stream

Infrastructure : Docker, Git, Linux, CI/CD, ELK Stack

Observability & Telemetry: Seq, ELK Stack, Prometheus, Grafana

LANGUAGES

Persian

Native

English

Advanced

SUMMARY

Backend-focused Software Engineer with 4+ years of experience designing scalable, modular systems using .NET and Python. Specialized in Domain-Driven Design (DDD), microservices, and clean architecture, with a strong focus on system design and real-world modeling.

Led architecture and domain modeling of core production modules, including distributed session management, lifecycle orchestration, and inventory locking — acting as both system designer and technical decision-maker.

Experienced in building resilient, high-concurrency systems using CQRS, outbox, saga orchestration, and event-driven patterns with RabbitMQ and Kafka. Skilled in observability pipelines (ELK, structured logging, tracing) and comprehensive testing (unit, integration, E2E).

Currently advancing backend expertise in Golang with a focus on concurrency and systems-level thinking. Passionate about scalable architecture, software craftsmanship, and contributing to high-impact engineering teams.

PROJECTS

Dextrox – No-Code Workflow Engine (in progress)

Prototype backend engine for automating message flows (Telegram/Instagram bots). Focused on rule-based triggers, scoped memory, and BPM-inspired modular design. Currently evolving into a scalable MVP with support for 1000+ concurrent sessions

Mini Research – RAG & Model Context Protocol

Built a demo system integrating Retrieval-Augmented Generation with MCP for intelligent reporting. Explored advanced AI-assisted backend patterns for data-heavy applications.

EDUCATION

Bachelor of Computer Engineering

Payam Noor University of Bandar Abbas

10/2020 - 10/2024

Grade: 16/20
